

Nam (Logan) Nguyen

Syracuse, NY | 253-391-7245 | nnguyen6@oswego.edu
namnguyen31.com | linkedin.com/in/logann131 | github.com/quiet-node

SKILLS

- Front-End | Next.js • React.js • TypeScript • JavaScript • HTML • CSS • Tailwind • Styled Component • WordPress
- Blockchain | Ethereum • Solidity • Hardhat • Waffle • Ethers.js • Web3.js • Truffle • OpenZeppelin • Remix
- Back-End | Golang • Open Liberty • Spring Boot • NodeJS • Express • MongoDB • MySQL • Firebase
- Deployment | AWS • Vercel • Netlify • Heroku • Docker • OnRender

EDUCATION

State University of New York (SUNY), College at Oswego

Jan. 2021 – exp. May. 2023

Bachelor of Science in Computer Science

CGPA: 4.00/4.00

- Courses: Data Structures and Algorithms, Problem Solving, Front-end Web programming, SQL Databases

EXPERIENCE

Full-stack Software Engineer Internship, Jobs4Interns – Domenix

Sep. 2022 – Dec. 2022

- Developed a scalable web application that assists interns connect with employers and land on internships with ease
- Successfully practiced **Agile** methodologies to support collaborative team efforts, improve project transparency, and facilitate timely project completion
- Collaborated with a **Scrum** team of 6 to design and plan future applications and services, leveraging **MERN** stack expertise to create efficient restful APIs, facilitating seamless data transfer between the front-end and back-end systems
- Implemented **Node.js** applications and services that ensured high performance and robustness, resulting in an enhanced end user experience
- Effectively managed front-end development and integrated third-party APIs (e.g., Redux, Material UI) to optimize functionality and enhance user experience
- Developed comprehensive Unit Tests using Mocha and Chai frameworks, ensuring application reliability and scalability while effectively identifying and resolving technical issues
- Proficient in Git for seamless code management and version control, enabling efficient collaboration within the development team

Web Development Intern, SUNY Center for Professional Development

Feb. 2022 - May. 2022

- Conducted proactive monitoring of website performance, swiftly addressing any technical issues, and troubleshooting as necessary to ensure optimal functioning of a highly complex network of 30 WordPress websites

PROJECTS

Spark Your Noble Story (SYNS Platform) (Full stack + Blockchain)

(Capstone project) – <https://github.com/syns-platform> - <https://syns.vercel.app>

- Designed and developed a revolutionary web 3.0 platform that combines NFTs, music-donation system, NFT marketplace, club membership, and social media features, empowering musicians and fans to connect, showcase, and promote their music, revolutionizing the music industry
- Implemented **Next.js**, **React.js**, and **TailwindCSS** to create a seamless and user-friendly interface for the platform, enhancing the user experience and enabling musicians and fans to easily interact with the platform's features
- Utilized advanced **SEO** techniques, including thorough keyword research and on-page optimization, resulting in a notable enhancement of the website's SEO performance and increased visibility on search engine results pages
- Utilized the third-party APIs from **Ethers.js** library to connect the client application to the blockchain, allowing for seamless NFT transactions and donation processes
- Implemented 3 restful-based microservices for the backend using **Golang** and **MongoDB**, providing a robust and scalable infrastructure for off-chain data management and API services
- Developed and deployed 5 **Solidity** smart contracts on **Polygon** to reduce gas fees by 90%, while enabling low-cost NFT creation and efficient management, as well as offering club membership and donation functionalities

Dev Meet Up (Full stack)

(Side project) – <https://github.com/quiet-node/meetup-app>

- Implemented a comprehensive social platform, **MeetUp**, with an interactive user experience that includes profile customization options and community engagement through post updates, likes, and comments
- Implemented **JWT** to ensure modern security standards and protect sensitive data from unauthorized access and potential vulnerabilities
- Engineered a scalable back-end solution using **Express.js**, **Node.js**, and **MongoDB**, enabling the development of high-performance restful APIs for efficient data retrieval
