## Nam (Logan) Nguyen

Oswego, NY | 253-391-7245 | nnguyen6@oswego.edu

namnguyen31.com | linkedin.com/in/logann131 | github.com/logann131

## **SKILLS**

•	Front-End	Next.js • React.js • TypeScript • HTML5 • CSS • Tailwind • Styled Component • Bootstrap • WordPress
•	Blockchain	Ethereum • Solidity • Hardhat • Waffle • Ethers.js • Web3.js • Truffle • OpenZeppelin • Remix
•	Back-End	Golang • Open Liberty • Spring Boot • NodeJS • Express • MongoDB • MySQL • Rest API • Firebase
•	Deployment	AWS • Vercel • Netlify • Heroku • Docker • OnRender

## **EDUCATION**

# State University of New York (SUNY), College at Oswego

Jan. 2021 – exp. May. 2023

Bachelor of Science in Computer Science

CGPA: 4.00/4.00

Courses: Software Engineering, Data Structures and Algorithms, Front-end Web programming, SQL Database, Capstone

#### WORK EXPERIENCES

## Full-stack Software Engineer Internship, Jobs4Interns – Domenix

Sep. 2022 – Dec. 2022

- Successfully practiced Agile methodologies to support collaborative team efforts, improve project transparency, and facilitate timely project completion
- Collaborated closely with teammates in a Scrum team of six to create efficient restful APIs utilizing the MERN stack, facilitating seamless data transfer between the front-end and back-end systems
- Experienced in using Atlassian Tool Suite (JIRA, Confluence, BitBucket, etc.) for project management and collaboration
- Implemented Redux store to manage the application state and improve code scalability and organization

# Web Development Intern, SUNY Center for Professional Development

Feb. 2022 - May. 2022

- Successfully re-designed and expertly maintained a highly complex network of 30 WordPress websites
- Conducted proactive monitoring of website performance, swiftly addressing any technical issues, and troubleshooting as necessary to ensure optimal functioning of all WordPress sites

### **PROJECTS**

# **Spark Your Noble Story (SYNS Platform)** (Full stack + Blockchain)

 $(Capstone\ project) - \underline{https://github.com/syns-platform} - \underline{https://syns.vercel.app}$ 

- Led the development of the SYNS platform as a solo developer, utilizing cutting-edge front-end technologies such as **Next.js**, **TypeScript**, and **React.js** for efficient and user-friendly user experience
- Incorporated TailwindCSS to design and create a visually appealing and responsive user interface
- Utilized the **Ethers.js** library to connect the client application to the blockchain, allowing for seamless NFT transactions and donation processes
- Implemented 3 restful-based microservices for the backend using **Golang** and **MongoDB**, providing a robust and scalable infrastructure for off-chain data management and API services
- Developed and deployed 5 **Solidity** smart contracts on the **Polygon** network, allowing for low-cost and efficient NFT creation and management, as well as supporting club membership and donation functionalities

## Dev Meet Up (Full stack)

(Side project) – <a href="https://github.com/logann131/meetup-app">https://github.com/logann131/meetup-app</a>

- Implemented a comprehensive social platform, **MeetUp**, with an interactive user experience that includes profile customization options and community engagement through post updates, likes, and comments
- Utilized cutting-edge front-end technologies, including ES6, CSS, JSX, React Hooks, and Redux store, to build a visually
  appealing and interactive front-end
- Engineered a scalable back-end solution using **Express.js**, **Node.js**, and **MongoDB**, enabling the development of high-performance restful APIs for efficient data retrieval

## **NFTir** (Golang Back-End)

(Course/Individual Project) – <a href="https://github.com/nftir">https://github.com/nftir</a>

- Utilized **Gin-Gonic** framework to construct a robust and reliable Golang-based restful application server, offering exceptional performance and user experience for managing individual NFTs
- Integrated an **AWS DynamoDB** table to effectively store and manage metadata and information for individual NFTs obtained from the NFTGo API server, thereby enhancing data retrieval and processing efficiency within the NFTir project
- Leveraged AWS EC2, ECR, and ECS to deploy a containerized solution, achieving high scalability and efficiency
